Re: Hexavalent Chromium in Soils Analysis

We are currently undergoing some method improvement works to our method L080 – Hexavalent Chromium in Soils. As a result of these works, we unfortunately have to suspend our accreditation (MCERTS & ISO 17025) on the method until we have satisfied the accreditation body that the method improvements are valid and robust. Once these conditions are met we will reinstate the accreditation effective immediately. We do not expect this process to take longer than 8 weeks.

Please be assured that during this intermediate time all routine quality control checks will be maintained and we will be undertaking additional external quality assurance checks as part of the overall process.

Please accept our sincere apologies for any inconvenience caused and please be assured that we are working hard to ensure disruption to accreditation is minimal.

If you require any further information or wish to discuss this letter, please do not hesitate to get in touch.

Yours sincerely,
